

Bright Coffee Shop: Brainstorming

BUSINESS OBJECTIVES:

Which Products articles and product categories sell the most?
What time of day gives Bright Coffee the highest revenue?
Which stores perform best and which store performs the least?
How can sales data help the CEO increase revenue?
What actions can improve low-performing periods?

DATA SOURCES:

Bright Coffee Shop Excel dataset.
Convert CSV to Excel for Databricks ingestion.
Check missing values and duplicate transactions.
Confirm that transaction quantities and prices are numeric.
Group transaction dates, times, product names and store locations.

DATA ARCHITECT:

Excel → CSV → Databricks → SQL → Excel PivotTables and charts.

DATA ANALYSIS:

Total amount: $\text{unit_price} \times \text{transaction_qty}$
Total revenue: $\text{SUM}(\text{total_amount})$
Total units sold: $\text{SUM}(\text{transaction_qty})$
Average selling price: $\text{total revenue} \div \text{total units sold}$
Revenue contribution: $\text{product revenue} \div \text{overall revenue} \times 100$
Time interval: group transactions into morning, afternoon and evening

SQL ANALYSIS:

Revenue, units sold, time buckets and product rankings
Identify potential trends and test them against actual sales data.
Ranking products by total revenue and calculating their percentage contribution.
Store locations and their revenue

EXCEL ANALYSIS:

Download the Databricks data into Excel
Ensure all Rows are downloaded
create pivot-tables and Dashboard

EXCEL ANALYSIS:

Download the Databricks data into Excel
Ensure all Rows are downloaded
create pivot-tables and Dashboard

CEO PRESENTATION & Visualisation:

Create a Dashboard on Looker-Studio
Create a PowerPoint Presentation
Present to the CEO and provide some recommendations

WHAT THE COLUMNS TELL US?

Transaction_id

Specific transaction reference
Count transactions
Check duplicates
Shows transaction frequency

Transaction_date

Date of each sale
Daily, weekly, monthly and
seasonal sales trends

Transaction_time

Time of each sale
Peak sales hours and slow periods

Transaction_qty

Number of items sold
Total units sold and product
demand

Transaction_qty

Number of items sold
Total units sold and product
demand

Store_id

Unique store identifier
Compare performance amongst
stores

Store_location

Location of the store
Identify top-performing locations

Product_id

Unique product identifier
Compare individual products and
top performing products

Unit_price

Price @ item
Calculate sales revenue and
compare product prices

Product_category

Product group
Compare categories, such as
Coffee, Tea or Bakery

Product_type

Specific type of product
Identify which types generate the
most revenue or sales volume

Product_detail

Detailed product description
Identify specific products that are
performing and underperforming
